## **Gold Bar boil water advisory ends for all customers**

**Gold Bar** — Residents of Gold Bar no longer have to boil their drinking water. Test results today were satisfactory on samples collected from the system.

City officials quickly notified customers and issued the precautionary advisory Wednesday night when a water main broke.

Water samples were collected after the broken water main was repaired and the lines flushed yesterday. The test results show that water in the Gold Bar water system meets state standards.

The City of Gold Bar is located east of Monroe along State Route 2 on the way to Stevens Pass. The city provides drinking water to approximately 2,200 residents and approximately 50 commercial establishments.
